# Enable PPG PaintManager™ Data Interface
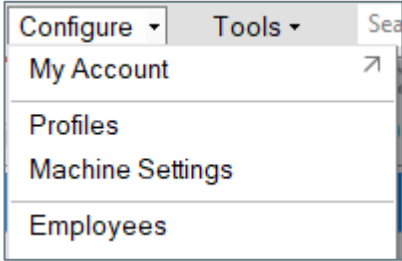

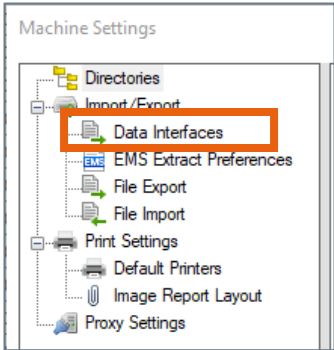

**Introduction**

CCC ONE® allows you to enable Data Interfaces with external vendor applications. To do this, you must set up the Data Interface and accept the EULA for that vendor.

This job aid describes how to set up a Data Interface for PPG PaintManager™.

**Add Data Interface**

**Note:** Only one PPG PaintManager™ Data Interface can be set up per machine with CCC ONE® installed. If you are an MSO user with access to multiple Locations, you will need to setup the PPG PaintManager™ Data Interface for each Location on separate machines.
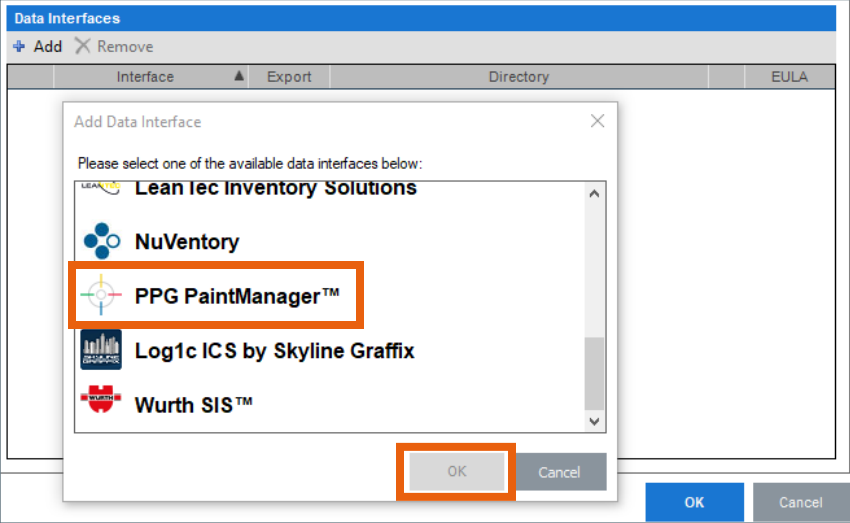

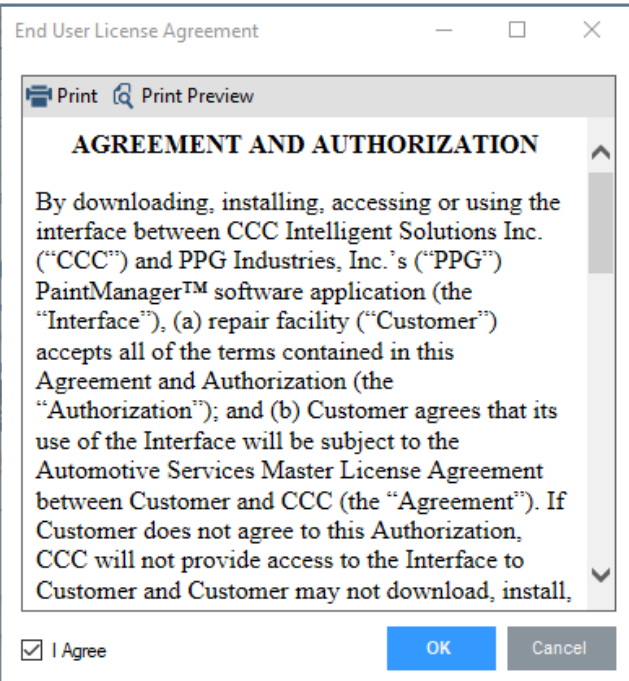

Use the following steps to enable the PPG PaintManager™ Data Interface:

| Step | Action |
|------|--------|
| 1 | Go to **Configure** and select **Machine Settings**.<br> |
| 2 | Locate **Import/Export** and select **Data Interfaces**.<br> |
| 3 | Click **Add** on the toolbar. The Add Data Interface screen opens. |

(continued)

| Step | Action |
|------|--------|
| 4 | Select **PPG PaintManager™** and click **OK**. <br><br>  <br><br> The EULA will display. |
| 5 | Click the **I Agree** checkbox and click **OK**. <br><br>  |

The PPG PaintManager™ Data Interface is added.  The next section shows how to complete the Data Interface setup.

## Enable PPG PaintManager™ Data Interface, Continued

**Setup PPG PaintManager™ Interface**

Use the following steps to configure the newly added PPG PaintManager™ Data Interface:

| Step | Action |
|------|--------|
| 1 | Defaults to Location currently logged into. |
| 2 | Choose an **Export Frequency**. Default is "Every 1 Hour". |
| 3 | Enter or browse to the **Directory Path** for the exported file. |
| 4 | Click **OK** to save your selections. |

Once set up, the computer MUST be logged into CCC ONE to export the XML files using the settings you selected.
