

Configure Calibration Guidelines

Introduction Diagnostic calibration recommendations are available to shops that participate in a Direct Repair Program (DRP) with certain insurance carriers. For these shops, participation in the DRP requires integration with a designated diagnostic provider, which varies depending on the carrier. This integration enables access to diagnostic recommendations specific to the repairs being performed in the workfile.

This job aid outlines how to configure CCC ONE® to display diagnostic calibration recommendations on workfiles associated with supported carriers.

Note: Your shop must be subscribed to Perform or Innovate to use this feature.

Diagnostic Connection Follow the steps below to configure CCC ONE® to display diagnostic calibration recommendations:

Step	Action	
1	Login to cccone.com .	 Diagnostic Connections Activate and manage connections to diagnostic providers for your shops.
2	Select Menu , then Settings .	
3	Select Diagnostic Connections .	
4	Select +Add , then select the appropriate connection option from the list.	 Note: The connection type varies by carrier, see the carriers' guidelines to select the appropriate connection type.
5	Select OK , then select I Accept , once you have read and agree to the Terms of Use. The diagnostic scan provider is now added.
