

# CCC ONE® Analytics: Method of Inspection Mapping

**Overview** Beginning with CCC ONE® Estimating 1.7.1 for staff appraisers and CCC Portal November 2017 Release, there is a new Method of Inspection field called **Inspection Type**. The existing **Site Type** field maps to the **Inspection Location Method Codes** already in use. Predictive Analytics and the Analytics Core Reports can now leverage the Inspection Type and Site Type to improve reporting and Predictive MOI.

The Insurance Company must make changes to their Inspection Methods Codes to include the new one called **Inspection Type**. If they cannot or will not make those changes, then the chart on the next page shows how the Inspection Method Codes map to the Inspection Location on the Portal and Assignment Entry and to the Site Type in CCC ONE to the Inspection Type (NEW) in CCC ONE.

## Examples:

This job aid provides the mapping from the Inspection Method Code to the Inspection Location/Site Type combined with the Inspection Type and Appraiser type maps to a Standard MOI Grouping.
