

Predictive Method of Inspection - Core Reporting

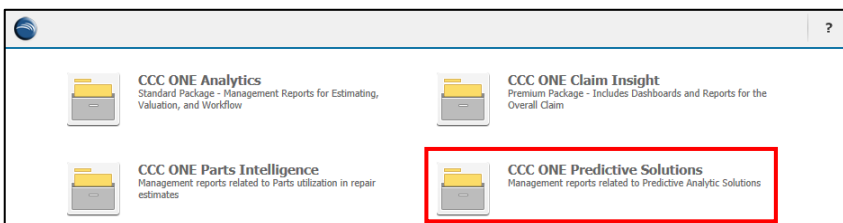

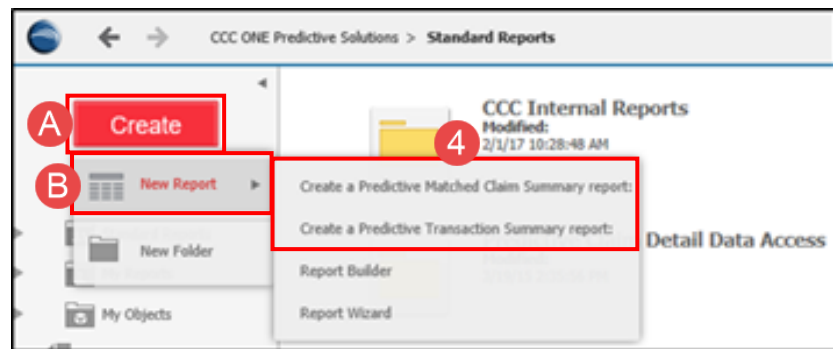

Introduction The CCC ONE® Predictive Method of Inspection (PMOI) reports enable users to effectively route vehicles to the optimal appraisal channel at the first notice of loss. Reporting for PMOI gives a few values for the 1st – 5th PMOI, this includes the match counts.

Note: The MOI values are assumed based on what was provided at the launch date and does not reflect the current detail and categories of the new MOI reporting across the rest of the analytics solution. As part of the MOI update ensure the PMOI reflects these new definitions and directions, this allows comparison for similar data across CCC’s reporting options.

Note: Visit the glossary to view a full list of terms and definitions.

Navigate to Predictive Solutions

Follow these steps outlined in the table below to navigate to the Predictive Solutions reports:

Step	Action
1	Login to the CCC ONE® portal.
2	Click CCC ONE Predictive Solutions . 
3	Click (A) Create , then select (B) New Report , a list of report builders appears.
4	Select a desired report builder.

Predictive Method of Inspection - Core Reporting, Continued

Users & Applications Impacted

The following CCC ONE® Analytics report builders have been added to Predictive Solutions:

- Create a Predictive Matched Claim Summary Report
- Create a Predictive Transaction Summary Report

Predictive Attributes

Choose Predictive Attribute(s) from the list of available options highlighted below. These attributes (standard 1st/2nd/3rd MOI Code) better reflect the MOI group and include new MOI groups as mappings are updated with industry data.

MOI Attribute(s)

Choose MOI Attribute(s) from the list of available highlighted options below. Attributes are also included that combine to make these codes available to be pulled into the report.
