

Documenting Warning Lights

Overview

CCC Checklists is a paid subscription add-on for CCC Estimating. Please contact CCC to request this feature.

Warning lights should be documented when the vehicle first arrives at the shop and after the repairs are completed.

Open Checklists

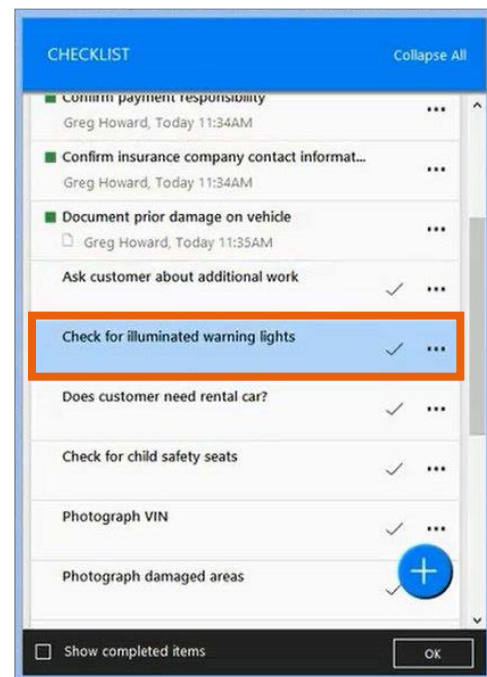

In an open Workfile, select the **Checklist** button to open the Checklist dialog box.

Note: In this feature, the **Checklist** button has replaced the **Task** button. All tasks will appear here.

From the Checklist

To document the warning lights from the Checklist menu, select the checkmark for **Check illuminated warning lights**.

Documenting Warning Lights, Continued

Selecting Warning Lights

The **Check for illuminated warning lights** dialog box opens. Select the appropriate warning lights. You can also add an optional note if needed. When finished, click **OK**.

Note: If **Other Warning** is selected, the **Notes** section becomes a required field. Use this to document the name of the other warning.

Completed Repairs

When the repairs are completed, revisit the **Check for illuminated warning lights** Checklist item, and make necessary changes. Attempt to remove all warning lights; changes will be documented in the **History** tab.
